

Business continuity. Product key knowledge life cycle. Missed role of solution architect

# Business continuity Product key knowledge life cycle Missed role of solution architect

Modern business is impossible without business rules and processes automated with software.

The success of such business machine is very dependent on efficiency and actuality of these rules and processes.

But who keeps the vital key knowledge, improves and optimize the business machine operated by company staff?

Lets have a talk about architects of business solutions, the key constructors of business products.

# Product lifecycle

Requirements

Principles Solution

**Specification** 

Technical architecture and technical design

**Implementation** 

**Support Operation** 

Market, Life, Law, Experts, Analysts ..

**Business product** solution architect

Analyst, UX/UI designer IT architect

PM, Dev team

IT Operations
Operations

#### Business

money consuming & return profit return

**operations** 

work resources consuming

controlling software

automation

production

material resources consuming product return

#### **Business machine**

controlling software production business machine

drivers

business machine

controlling software is our product

material production is often minor part in informational business e.g. banking, investment, insurance ...

# SW product lifecycle

insight implementation correction / change / update closing

execution

- Arrangement projects bring business machine and expenses
- Execution gives profit

### **Business continuity**

The business rules and process solution is vital for business life and continuity.

It is continuously changes adopting to environment challenges.

The changes should improve the solution for the business, not degrade it.

#### The solution

Requirements are Challenges.

The Knowledge and Experience are the Forces.

The Solution is the Answer to challenges.

Technical development is solution Implementation.

The operation is solution Consuming.

# Product creation & change

There is certain difference between Requirement & Fact Experts, e.g. market, life, law, business experts & analysts ...

and Solution Architect, who can bring Solution satisfying those requirements and facts

Technical implementation with Developers and UX/UI Designers is just implementation of the Solution.

## Product changes

Changes of product are required throughout the all product lifecycle (during the 'birth' and the all its life).

Hence the architect of business solution and key product knowledge expert are required throughout the all product life.

Operation staff is only driver of the business machine.

#### Conclusion

Company shall have and keep onboard the solution architect as its brain and DNA.

Developers and operations can be outsourced.

# Your opinion?

What do you think about it?

What is your experience?

What is your solution?
